

RESONA HEALTH

# RFT MIGRAINE PILOT STUDY

## 30 - DAY AT HOME STUDY

### GOAL

To test the effects of Resonance Frequency Therapy™ (RFT) and improvements in and relief from migraine headaches.

### BACKGROUND

Frequency therapies have been around for decades with many successful outcomes. They are safe and effective with little or no known side effects. There are many references and publications on Resona.Health related to this technology. To date, these therapies have been conducted in clinical settings with expensive equipment – as much as \$10,000 + per system. Doctor visits are time consuming and expensive for the patients. A low-cost consumer device has now been developed to demonstrate similar results can be achieved with this home system. We are looking for an migraine organization to partner with us to perform this study.

### SCOPE

The frequency protocols are delivered with a PEMF device (small magnet pulse device) that is driven by a cell phone or tablet. The frequencies are extremely low energy and cannot be felt by most people. The patient simply lays/sleeps with the PEMF device under the pillow. The PEMF device is small, about 10 cm X 8 cm and only a few ounces in weight. Participants run the therapy protocol 3-4 times a week or as needed for 30 days. Participants fill out an online survey at the beginning and end of the project, sign a “hold harmless” agreement, and participate in a 20-minute exit interview.

**There are no chemicals or drugs involved in this study and there is no cost to participants. At the succesful completion of the study, the particapnts can keep the device free of charge.**

### ACTIONS

Contact [info@Resona.Health](mailto:info@Resona.Health) to schedule a conference call to discuss this proposal and how it can benefit your organization.
